## **Pedders Lower Control Arm Bushes to suit Holden Commodore**

Pedders Suspension has available the 5843 and EP9019 radius-rod and the 5823, EP6011 and EP6500 inner bush kits to suit front lower control arms of the following Holden/HSV/HDT Commodore, Statesman and Monaro models.

**5843 Rubber Radius-Control Arm Bush to suit 78-06 Commodore, Statesman & Monaro Models:** Designed as a direct heavy duty replacement, the 5843 is a one-piece rubber bush manufactured from high-quality, durable rubber and offers high levels of suspension noise, vibration and harshness (NVH) suppression while providing good longevity.

**EP9019 Urethane Radius-Control Arm Bush to suit 78-06 Commodore, Statesman & Monaro Models:** Suited for the performance-driven enthusiast, the EP9019 is the perfect addition to the above mentioned models. Constructed from high-density, high-durability urethane, the EP9019 provides a greater degree of control over unwanted suspension movement where the radius-rod joins the lower control arm and is the perfect addition to vehicles with sports suspension installed. The installation of the EP9019 bush kit equates to a more direct 'feel' of the vehicle's steering and also limits excessive front wheel deflection under heavy braking conditions compared with original equipment rubber radius-rod bush equipped vehicles.

**5823 Rubber Lower Control Arm Bush to suit 78-06 Commodore, Statesman & Monaro Models:** The Pedders heavy duty one-piece design 5823 rubber lower control arm inner bush is manufactured from high-quality, durable rubber and is a direct replacement for the original Holden bush. The 5823 rubber lower control arm bush has been specifically designed to offer high levels of suspension noise, vibration and harshness (NVH) suppression while providing good longevity.

**EP6500 Urethane Lower Control Arm Bush to suit 97-06 Commodore, Statesman & Monaro Models:** Suited for the performance-driven enthusiast, the EP6500 is the perfect addition for 1997-2006 VT-VZ Holden and HSV models. Constructed from high-density, high-durability urethane, the EP6500 is an easily installed, two-piece design and is the perfect addition to vehicles with sports suspension installed. The installation of the EP6500 bush kit equates to a more direct 'feel' of the vehicle's steering and provides a greater degree of control over unwanted suspension movement under heavy braking/turning conditions compared with original equipment rubber control arm bush equipped vehicles.

**EP6011 Urethane Lower Control Arm Bush to suit 78-06 Commodore, Statesman & Monaro Models:** Suited for the performance-driven enthusiast, the EP6011 is the perfect addition to the above mentioned models. Constructed from high-density, high-durability urethane encased within a steel sleeve, the EP6011 provides an even greater degree of control over unwanted suspension movement in the lower control arm and is the perfect addition to vehicles with sports suspension installed. The installation of the EP6011 bush kit equates to a more direct 'feel' of the vehicle's steering and also limits excessive front wheel deflection under heavy braking conditions compared with original equipment rubber radius-rod bush equipped vehicles.
